# SOLVEX NETWORK

WHITEPAPER

SOLVEX

VERSION 2.0 | 2025

1. Executive Summary

Solvex Network is a forward-thinking blockchain project built on the principles of decentralization and

transparency. Developed by a team with blockchain expertise dating back to 2017, Solvex aims to offer users

a faster, more efficient, and more autonomous digital ecosystem. With its native non-custodial wallet (Solvex

Wallet), users can securely manage their assets in a fully decentralized manner.

2. Vision and Mission

Vision: To make decentralization accessible and sustainable for everyone.

Mission: To empower individuals and institutions to perform digital transactions securely, transparently, and

independently from centralized systems.

3. Technology and Infrastructure

- Blockchain: EVM-compatible, high throughput, low gas Layer-1 chain.

- Solvex Wallet: Non-custodial, multi-asset support, NFT/DeFi ready, advanced security layers.

- Smart Contracts: Open-source, audited, and community-governed modules.

4. Tokenomics

Token Name: Solvex (SOLVEX)

Total Supply: 100,000,000

Burned: 50,000,000 permanently removed from circulation.

Circulating Supply: 50,000,000

Distribution: 100% Community (fully circulating, no vesting or locks)

Utility: Transaction fees, staking, governance, and network services payments.

5. Decentralization and Community

Solvex is governed and steered by its community.

- DAO-based voting for key decisions

- Transparent development and wallet tracking

- Incentive models for developers, content creators, and community supporters

6. Use Cases

- DeFi infrastructure

- NFT management and marketplace

- dApp development tools

- Fast and low-cost microtransactions

- Decentralized Web3 identity solutions

7. Roadmap

Q4 2024: Concept finalization, token launch, Solvex Wallet v2 release

Q1 2025: Community governance, listings, 50M token burn

Q2 2025: DAO infrastructure rollout, wallet upgrade with multi-chain and staking

Q3-Q4 2025: Launchpad, NFT marketplace, enterprise partnerships, mobile wallet v2

8. Security and Audits

All Solvex smart contracts are audited by independent firms. The wallet uses advanced encryption and stores user data in a decentralized format.

9. Conclusion

Solvex Network is more than a token - it's a decentralized platform shaping the Web3 future. With 50% of its supply burned and the rest fully in circulation, Solvex ensures transparency and long-term viability. Driven by its community, Solvex sets a new benchmark in speed, security, and trust in blockchain.

10. Products

Our solutions that make blockchain technology accessible for everyone

1. Digital Card

Establish fast, effective, and modern communication through QR codes and digital links.

2. Auto Trading Bot

An automated crypto trading bot that operates 24/7 based on your selected strategies.

3. Wallet

A multi-chain supported, secure and user-friendly wallet system that requires zero technical knowledge.
